PROFESSIONAL SUMMARY

Master's student in Computer Science at NYU with full-stack, cloud, and ML engineering experience across internships, a co-founded startup, and independent projects. Proven ability to build production-ready systems from agentic AI and microservices to deepfake detection and generative AI pipelines. IEEE-published researcher with depth in Java, Python, React Native, AWS, and Kubernetes.

EDUCATION

New York University <i>Master of Science, Computer Science. GPA: 3.2.</i> Relevant Coursework: Design and Algorithms of Applications, Big Data, Human Computer Interaction	New York, NY May 2026
SRM Institute of Science and Technology <i>Bachelor of Technology, Computer Science and Business Systems. IEEE Publication:</i> <i>Integrated Women's Safety System with Safe Route Navigation and Instant Law Enforcement Reporting. GPA: 3.55.</i>	Chennai, India June 2024

EXPERIENCE

Java Full Stack Developer Intern <i>Trident Prep</i> - Architected scalable backend services and RESTful APIs using Java/Spring Boot and Node.js/PostgreSQL, reducing backend error rates by 30% across 3 core authentication and platform workflow modules. - Designed a cloud-native AWS Glue/Apache Spark data pipeline with Terraform IaC, enabling parallel batch processing of 500,000+ records with fault tolerance and horizontal scalability. - Decomposed monolithic services into microservices with RBAC, audit logging, and CI/CD automation.	Jan 2026 – May 2026 New York, NY
Co-Founder and Lead Engineer <i>VibeBrews</i> - Co-founded and shipped a React Native platform transforming natural language prompts into playable HTML5 games, combining a TikTok-style discovery feed with generative AI workflows for user-generated content. - Engineered real-time multiplayer via WebRTC/PeerJS and built a multi-phase AI generation pipeline (plan, generate, merge, validate, publish), driving the product from concept to live MVP.	Jan 2026 – Present New York, NY
Software Engineer Intern, Agentic AI <i>Unytalk Inc</i> - Shipped agentic AI features using Java/Python and React on a live B2C platform, improving weekly user engagement. - Deployed microservices across 5+ services with Docker, Kubernetes, and GitHub Actions; implemented DevSecOps controls (RBAC, OAuth, scanning), reducing unauthorized access incidents by 40%.	June 2025 – Aug 2025 Remote
Data Science Intern <i>Quickheal Technologies Pvt Ltd</i> Built a deepfake detection model (PyTorch/CNN) at 96% accuracy, flagging 10,000+ suspicious media files; developed an ML-based IPS achieving 97.33% accuracy across 15+ attack categories.	Feb 2024 – Aug 2024 Pune, India

PROJECTS

Popy-tinkle: Browser Download Quarantine Extension and Daemon CLI Built a Chromium MV3 extension quarantining downloads into the OPFS sandbox; developed popyd, a CMake-based CLI daemon extending quarantine semantics to AI coding agents. Stack: JavaScript, Chromium APIs, C++, CMake.
RAG System for Robot Operating System (ROS2) Designed a RAG system with ETL ingestion from GitHub/YouTube, enabling semantic code search across 50,000+ indexed documents and reducing query resolution time by 60%. Stack: Python, MongoDB, Qdrant.
AI-assisted Deep Web Digital Footprint Analyser Built a PII detection platform with custom NER pipelines achieving 94% accuracy across 15+ categories; containerized with Kubernetes for auto-scaling. Stack: Vue.js, FastAPI, Spring Boot, SpaCy, PostgreSQL.

AWARDS & HONORS

- 2nd Place, CINTEL Coding Ninjas Hackathon
- Open-source contributor: Daft (Eventual Inc) — patched integer overflow in I/O retry backoff module (Rust); merged to main
- Open-source contributor: Kapre deep learning library

SKILLS

Technical Skills: Java, Python, C++, Rust, JavaScript/TypeScript, SQL, Swift, R, MATLAB

Frameworks and Tools: Spring Boot, React Native, Vue.js, Node.js, FastAPI, PyTorch, Scikit-Learn, SpaCy, Express.js, SwiftUI

Infrastructure and Cloud: Docker, Kubernetes, AWS (Glue, EC2, S3), GCP, Terraform, CI/CD, ELK Stack, Grafana/Prometheus

Systems and Data: PostgreSQL, MongoDB, Redis, Apache Spark, NLP, Deep Learning, CMake
